

CLASS DESCRIPTION

PROJECT RISK MANAGEMENT

This training class is focusing on project risk management. It is presented as an integrated and consistent way of managing project risk along the main enterprise environmental factors as; corporate culture, corporate strategy and market positioning. The proposed approach was successfully tested against different types of projects as: global projects, complex projects managed under a consortium of stakeholders.

GOAL

The goal of this class is to enable participants to understand and integrate the concepts of risk management in all the phases of the management of a project.

INTENDED AUDIENCE

This session is directed to project managers as well as program or portfolio managers, with some degree of experience, who wish to acquire an effective and proactive approach to manage project risks at the onset of their projects.

It is beneficial to have some experience in project management or to master the skills acquired from a basic training in project management.

LEARNING OBJECTIVES

This training class will enable the students to:

- identify project risks;
- analyse identified risks;
- establish an effective mitigation plan for the analysed risks;
- put in place a risk management plan;
- develop their own tools to execute their risk management plan

COURSE MATERIAL

The participant workbook includes:

- Schematics of the presentation;
- Tools and exercises.

TRAINING STRATEGY

The training strategy is centered on a step by step implementation of the basics in risk management for each participant by:

- a lecture of the different concepts;
- a demonstration of the processes;
- individual workshop sessions on real life application of the theory on a project;
- one on one coaching sessions.

COURSE OUTLINES

- Introduction to project risk management
- Definition of tools and techniques used in risk project management
- Identification of key enterprise environment factors in project management risk
- Definition of a risk management plan
- Project case simulation
